

PIR Sensor On/Off Timers

The camera has two timers for turning the PIR Sensor on and off. When the Off timer is activated at the set time, the PIR sensor will turn off. The PIR sensor will be off till the On timer is activated or it is turned on forcibly by an SMS-command or with the help of the mobile application. The On timer activates the PIR sensor.

The On and Off timers let you set the period of inactivity of the camera. For example, from 8 am to 7 pm the camera will not be triggered by a movement since there are people in the area.

Since there are two timers, you can set two periods: for example, from 8 am to 1 pm and from 2 to 7 pm. You can set the PIR Sensor On/Off Timers using SMS commands or the Mobile App. For settings details refer to the appropriate sections.
