

Installation Coordinates

This screen is available only in cameras with firmware **1.0.49** and higher

This screen lets you set the camera's installation coordinates.

Camera's installation coordinates will be included in EXIF information of photos. In the future you will be able to determine coordinates of the area where the photo has been taken. For example, you can do it using the service <https://www.pic2map.com/> by dragging and dropping a photo onto the map.
